# PARAG ITHAPE

**SENIOR QA ENGINEER | SDET | TEST AUTOMATION & QUALITY ENGINEERING**

Pune, India | +91 8788894004 | qa.parag.ithape@gmail.com
LinkedIn: linkedin.com/in/parag-ithape | GitHub: github.com/parag-ithape

## PROFESSIONAL SUMMARY

Senior QA Engineer with 5+ years of experience in test automation, API testing, performance testing and quality engineering for enterprise cloud platforms. Hands-on experience designing and maintaining automation frameworks using Selenium WebDriver with Java/TestNG and Playwright with TypeScript, alongside REST Assured and Postman for API validation. Experienced in end-to-end test strategy, regression and release testing, CI/CD execution, SQL validation, JMeter performance testing and Datadog monitoring. Currently leading QA activities for enterprise platform workflows and mentoring QA engineers. ISTQB Foundation Level v4.0 certified.

## CORE SKILLS

**Automation:** Selenium WebDriver, Java, TestNG, Playwright, TypeScript, JavaScript, Cucumber (BDD), Page Object Model

**API & Data Testing:** REST Assured, Postman, SQL, UI/API integration testing

**Performance & Monitoring:** JMeter, Datadog (dashboards, logs and monitoring)

**CI/CD & Tools:** GitLab CI/CD, Git, Maven, JIRA, Xray, Confluence

**Quality Engineering:** Test strategy, test planning, functional testing, integration testing, end-to-end testing, regression testing, release validation, defect lifecycle, SDLC, STLC, Agile/Scrum

**AI-assisted QA:** Cursor AI, Claude AI, OpenAI API, prompt engineering, LLM-powered test-case generation

## PROFESSIONAL EXPERIENCE

### Senior Software Engineer – QA | Dec 2024 – Present

*R Systems (formerly Velotio Technologies), Pune*

- Lead QA activities for enterprise cloud platforms, owning end-to-end test strategy, coverage planning, execution coordination and release sign-off.
- Designed and maintained Selenium WebDriver, Java and TestNG regression automation frameworks, reducing regression cycle time by approximately 30%.
- Developed Playwright automation using TypeScript for modern web applications, improving execution speed and test stability.
- Designed integrated UI and API validation workflows to identify defects earlier in the development lifecycle.
- Executed performance tests using JMeter and analysed application health through Datadog dashboards and logs; identified and supported resolution of system bottlenecks.
- Integrated automated regression execution into GitLab CI/CD workflows and collaborated with cross-functional engineering teams on release quality.
- Mentor QA engineers and promote automation adoption and consistent testing practices across delivery teams.
- Developed an LLM-powered test-generation utility to convert requirements into structured test cases as a supporting QA productivity initiative.

### Quality Assurance Engineer | Oct 2021 – Nov 2024

*Concentrix, Pune*

- Automated critical business workflows using Selenium WebDriver, Java and TestNG, improving regression execution efficiency by approximately 25%.
- Designed and maintained Cucumber BDD automation to improve collaboration among QA, development and business stakeholders.
- Built and maintained REST API automation using REST Assured and Postman.
- Executed automated regression suites through GitLab CI/CD pipelines and maintained version control using Git.
- Created sprint-level Xray dashboards to report defects, test coverage and automation progress to stakeholders.
- Performed SQL validation to verify data integrity across integrated systems.

## SELECTED PROJECTS

### Acela – IT Asset Lifecycle Management & Procurement Platform

- Own QA for the Quote Module, validating quote creation, approval, submission and automated customer email workflows.
- Validate AvaTax location-based tax calculations, shipment costs, quantity discounts and margin logic for customer-facing quotes.
- Automate regression coverage using Selenium WebDriver and TestNG across asset-management and quote workflows.
- Validate dashboards, SLA tracking and alert automation; support performance testing with JMeter and Datadog monitoring.

### CockroachDB Cloud – Distributed SQL Database Platform

- Validated a distributed SQL cloud platform across UI, API and terminal/SQL layers.
- Tested cluster provisioning across Standard, Basic and Advanced tiers on AWS, GCP and Azure, including provider-specific pricing and configuration.
- Validated backup/restore, cluster scaling and provisioning workflows through UI, API, SQL and terminal checks.

### Asset Management Solution

- Tested asset lifecycle workflows including checkout, check-in, returns, repairs and status transitions, verifying audit history.
- Validated Coupa API integration and used SQL queries to verify procurement-linked asset data and record synchronization.

### AI QA Automation Framework – LLM-Powered Test Generation | OpenAI, Playwright, Node.js

- Built a supporting QA productivity framework that analyses requirements and generates structured, tagged test cases through a multi-stage workflow.
- Designed JSON output with metadata and tags for downstream automation; supports raw text and requirement-document inputs. GitHub: github.com/parag-ithape/aiqa-automation-framework

## EDUCATION

**Bachelor of Engineering (B.E.)** | Savitribai Phule Pune University | Aug 2012 – Jun 2016

## CERTIFICATIONS

- ISTQB® Certified Tester – Foundation Level v4.0 (2025)
- JMeter Performance Testing – Udemy (2025)
- Jira Fundamentals – Atlassian (2023)
- SQL for Testers – LinkedIn Learning (2022)
